PREFACE

India is said to be the capital of diabetes.Urbanisation,increasing mechanization,changing lifestyles,unhealthy food habits are the important reasons for the increasing incidence of diabetes.About 385 million people world wide are suffering from diabetes mellitus.50-60 million Indians are part of them. Diabetes is a chronic medical condition which can be controlled with proper care and attention. Awareness, early detection,proper medication and disciplined lifestyle play crucial role in keeping diabetes under control, enabl ing the patient, lead a normal life.

The after effects of uncontrolled disease are quite painful and dreadful. It may also turn out to be fatal.

1. Neuropathy-Nerve damage
2. Nephropathy-Kidney damage
3. Retinopathy-eyes damage
3. Cardiovascular disease-Heart disease and increased risk of strokes
4. Erectile dysfunction in men and decreased desire in men and women
5. Pregnancy complications
6. Weakness and depression

QUALITY is the Best Foundation for **SUCCESS**

It's time to listen to your feet.

One of the dangerous complications of diabetes is neuropathy. As the disease advances,nerves and blood vessels get damaged.Burning,tingling and pain are the early signs of its complications.Nerve damage causes loss of sensation In the foot making it susceptible to injuries. Redness,ulceration, wounds,corns,blisters and ingrown nails--the results of its aftermath. start getting infected.Damaged blood vessels make curing difficult. Consequently,tissue gets damaged and the entire situation leads to gangrene resulting in limb loss. Appropriate foot care, right from the early signs of complications, saves the foot. Proper medical footwear plays an important role.

Amulya defines it.

DIABETIC FOOT

Although diabetic neuropathy refers to a group of nerve disorders, feet and legs are the most commonly affected areas. In diabetics skin becomes tender and susceptible to diseases and injuries.

Therefore diabetics should be especially careful about their feet and legs. Proper foot care plays the most important role in saving the diabetic foot. Normal footwear are generally hard and consist of a number of negative factors like irregular heel heights, metal parts and seams touching the body and tight fit. These factors cause sores and blisters which are difficult to cure. Therefore it is necessary to devise a special class of footwear addressing the present and future foot problems generally faced by the diabetics.

ORTHO FOOT

Human foot is a marvellous structure consisting of bones, tendons, ligaments, joints, muscles etc. Its dynamic architectural wonder enable us to stand, walk, run and perform a number of other acts. However we face number of foot problems due to many reasons.

1. Arch defects-High arch or flat foot.
2. Varus and valgus-Fore foot problems
3. Unequal leg lengths-one leg taller/shorter than the other.
4. Bunions
5. Athletes foot
6. Warts
7. Plantar fasciitis
8. Corns and caluses
9. Retro calcaneal bursitis
10. Hammer toe

These disorders generally occur by birth, through diseases, indisciplined life styles and accidents. Defective footwear also play a vital role in causing damages to the foot.

Therefore there is need to devise proper footwear to meet the challenges.

Hence Amulya medical footwear.

Amulya devised medical footwear taking into consideration the general challenges faced by both diabetic and ortho feet. Decades of hard work is involved in developing these footwear. Eminent doctors including those from NIMS kindly rendered help and advice in the beginning. Different designs and materials were tried. Based on the feedback from the patients who tried our footwear and on doctors valuable advice several changes were made before standardising and perfecting the footwear. We are successful in providing proper footwear solutions for flat foot, bunions, corns, caluses, plantar fasciitis, warts, retro calcaneal bursitis, ulcers, amputated foot and many other disorders. Wherever our general and preventive footwear do not suit due to specific problems, we provide custom made footwear by thoroughly inspecting the foot.

We take maximum care about the production of medical footwear and use only selected high quality raw materials.

- Specially selected upper materials include soft leathers, synthetics and fabrics.
- Soft, non allergetic, sweat absorbing, highly comfortable padded linings.
- Light, skid proof, rockery soles.
- Highly comfortable replaceable multi layered in-socks which take the shape of the foot in usage.
- Wide girthed lasts to make the shoes roomy and to enable insertion of orthotics.
- Variety of designs to suit different end uses
- Avoid metallic fittings or seams touching the feet
- Strong counters for stabilising the heel and thereby the foot.

Our production line is fully equipped with speciality machines , moulds and equipment. Experienced work force and qualified technical staff look after production meticulously. Quality is continuously checked on production lines to ensure the produce as per specified standards. Samples are drawn at random from each batch and sent to national laboratories like FDDI and CLRI to ensure quality. Designing and production are carried out under the valuable advice and guidance of Dr.T.Vijender Rao,M.S Ortho, who himself is an eminent and senior Orthopaedic practitioner and proprietor of the organisation. The CEO of the organisation M.Venkateswara Rao is a very senior graduate in leather technology, with almost 40 years of experience in footwear, with special emphasis on medical footwear, under whose guidance and control, the organisation is managed.

We, therefore, confidently assure that Amulya medical footwear are preventive, functional, therapeutic, comfortable, elegant, light in weight and stand apart in providing stability and security to the ailing feet.

We supply medical footwear in bulk and as per the specific requirement of our clients. We also develop special designs in accordance with the buyer's requirements.

People with specific foot problems may approach us for proper custom made medical footwear.
